

Fast Track Service

- Have you been burnt by CAD/CAM software in the past?
- Have you invested time & money on a solution that did not live up to its promises?
- Are you looking for a way to KNOW that this is the right solution for your business?
- Do you want to give the solution the best chance of success?

If you answered YES to any of these questions then the FAST Track Service is right for you.

This is a unique service that you can utilise:

- before purchase to assure yourself that this is the right software solution, or
- after purchase to speed up implementation and start reaping the productivity rewards

The FAST Track service lets you see our solution in action on YOUR jobs, in YOUR environment. And as you are working on a live project the service can be costed back to this specific project.

How does it work?

One of our senior technician contacts you to gather relevant information about your production process. We then replicate your exact configuration of CNC tooling and construction methods on one of our experienced operator's computers. This may take place on or off site.

Once on site one of our experienced setout operators uses selected jobs to demonstrate how our system will revolutionise your production process. These are jobs that you currently have in production, so you get to see exactly how our solution works on your jobs AND make headway into your workload at the same time. They are then on hand for questions or issues that your team may be experiencing.

Depending on your needs you can expect:

- workshop drawings & plot sheets produced in accordance with your standards/requirements
- automatically generation of Cutting Lists, Part Machining, Optimised Nested sheets in G-Code ready to be cut out on your CNC
- labels including tooling etc

All our operators are fully trained in all software supplied through Integrated Joinery Solutions Pty Ltd. They are qualified tradespeople who have been exposed to many different companies and have a wealth of experience and advice they can offer during this critical stage.

It is important not to underestimate the effect of change on your team. Some team members can be slower to adapt to the changes that a new software solution brings to a business and can fall back on old habits. The FAST Track Service assists to counteract this and embed the solution into your business quickly.

What are the costs associated with the Service?

The FAST Track Service is costed on an hourly rate which covers:

- expert technician's time to setup your configuration on our system
- expert setout operator's time

We recommend a minimum of 5 working days to truly see the system in action, with most clients opting for 2 weeks.

Additional costs incurred:

- expenses if outside Sydney Metro area
- cost of a 30 day trial version of TopSolid'Wood for your team to use if you are using the FAST Track Service prior to purchasing the software. This is deductible from purchase price.

The FAST Track Service is available for TopSolid'Wood and Enroute/Ezynest software only.
